PCI-DSS

GDPR

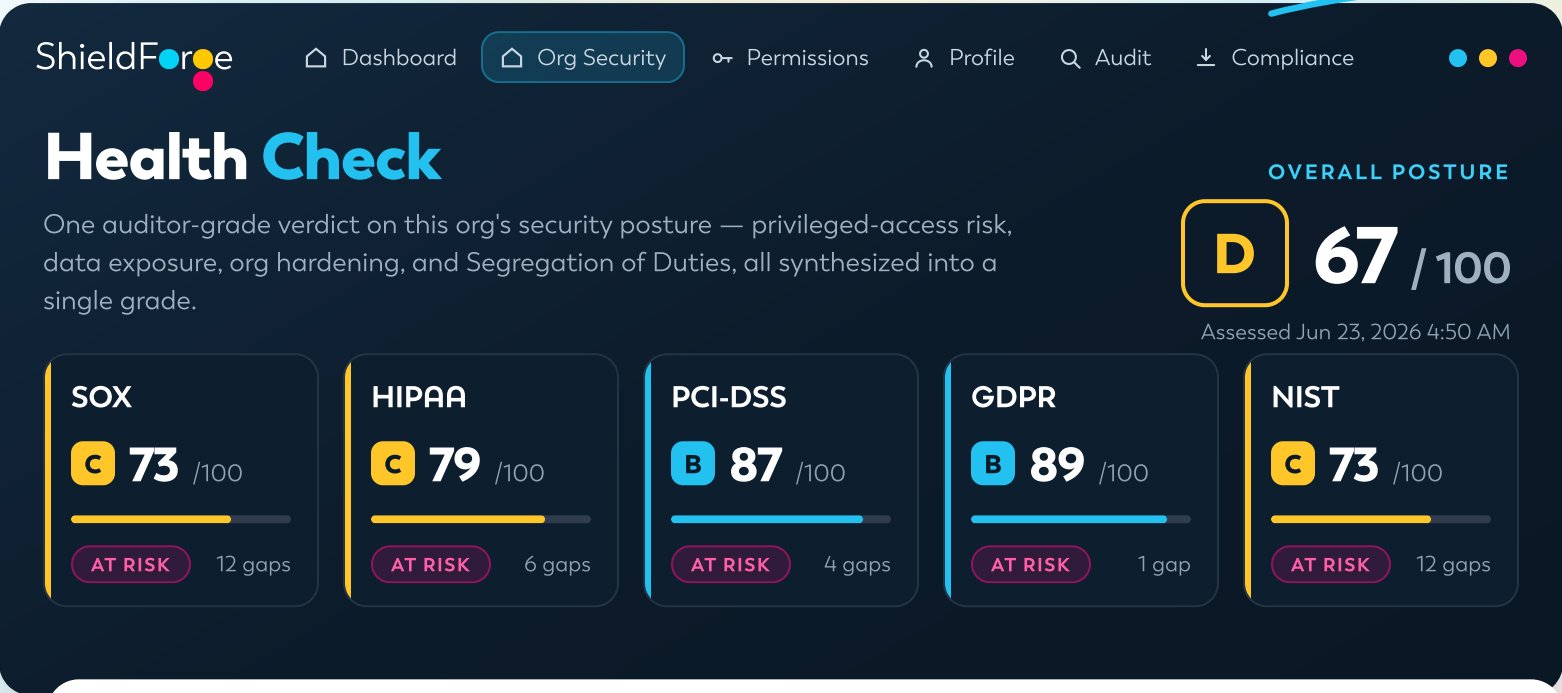

NIST

Illustrative demo view

Audit readiness. Security visibility.

Security posture, compliance findings and audit evidence in one workspace.

- SOX and compliance**
Map findings to SOX, HIPAA, PCI-DSS, GDPR and NIST.
- Segregation of duties**
Identify conflicting permissions and review affected users.
- Org Security and Health Check**
See posture scores, privileged access and prioritized risks.
- Audit evidence**
Trace access grants and document reviews with attributable logs.

Clearer access.

Simpler administration.

Practical tools for admins, architects and support teams.

- User 360 and effective access

See who can do what, why, and how users differ.
- Permission intelligence

Analyze and compare permissions. Find and merge duplicates.
- Profile migration

Move to permission sets through reviewable steps.
- Release Radar and CAB reports

Assess release impact and prepare deployment evidence.
- Storage, FinOps and Dev Tools

Find archive candidates and query, import or export in context.

Profile Migration

Move a profile onto a least-privilege permission set in reviewable steps — first its object, field and system permissions, then record types, apps and tabs, then the validation rule and flow references that point at the profile. The source profile is never modified, so every step is reversible.
